

Greenhouse Growing – May 26th & 27th

Spend the weekend with us at CRMPI!

- Greenhouse Design & Installation
- Low Energy Climate Battery Technology
- Soil Creation & Maintenance
- Integrated Pest Management (IPM)
- Planting Calenders & Best Varieties
- Stacking Functions – Getting the most from your space.
- Forest Gardening Indoors
- Managing Temperature & Humidity
- Creating Indoor Ecosystems
- Hands-On Greenhouse Projects in a CRMPI greenhouse.

Grow tropical bananas in the Rockies? Yes! Learn the intricacies and design of greenhouse growing with an emphasis on perennial poly-culture and making the most of space. Learn how to stack functions to make your greenhouse more effective and efficient. Taught by Jerome Osentowski, founder of the Central Rocky Mountain Permaculture Institute in Basalt, CO. CRMPI contains four greenhouses, each with its own unique design and focus; Phoenix is the largest and features fruiting papayas, banana trees and a mix of tropical perennials and annual vegetables, Mana is the next largest and features Mediterranean plants such as fig and rosemary, the Cabin greenhouse is primarily used for extra summer annual crops and herbs, and Sri is a supplemental greenhouse featuring a rotating variety of annuals and a few perennial herbs.

Workshop fee is \$300. Camping, meals and curriculum materials included.

Evening activities include wood fired sauna, hot tub, & waterfall hike.

Please go to <http://CRMPI.org> or call 970- 927-4158 for more information or to register.
